Agent-first API

— THE PREMISE

~~Writing software is no~~
longer the bottleneck.
Publishing it is.

2018

A team of 12 shipped a consumer app in nine months. The hard part was the code.

2026

An AI agent generates that app in an afternoon — and then stalls for three weeks trying to publish it.

— PROBLEM

Shipping means Learning 30+ dashboards.

Every surface has its own API, review queue, credential model, and quirks. Every one can silently reject a release.

- App Store

- Play Console

- Chrome Web Store

- Homebrew tap

- npm registry

- Docker Hub

- JSR

- Cloudflare Pages

- Fly.io

- Railway

- Vercel

- RunPod

- DigitalOcean

- Vultr · Hetzner

- TestFlight

- F-Droid

- Steam Deck

- Meta Quest

- Vision Pro

- Apple TV · Roku

publish at 0x.

GAP

~0

CAN PUBLISH TO EVERY MAJOR SURFACE

MARKET

— SOLUTION

One manifest. Every surface.

01 - BUILD

Compile every artifact, in parallel.

02 - PROMOTE

Publish · ads · investors · funding · podcasts.

03 - SCALE

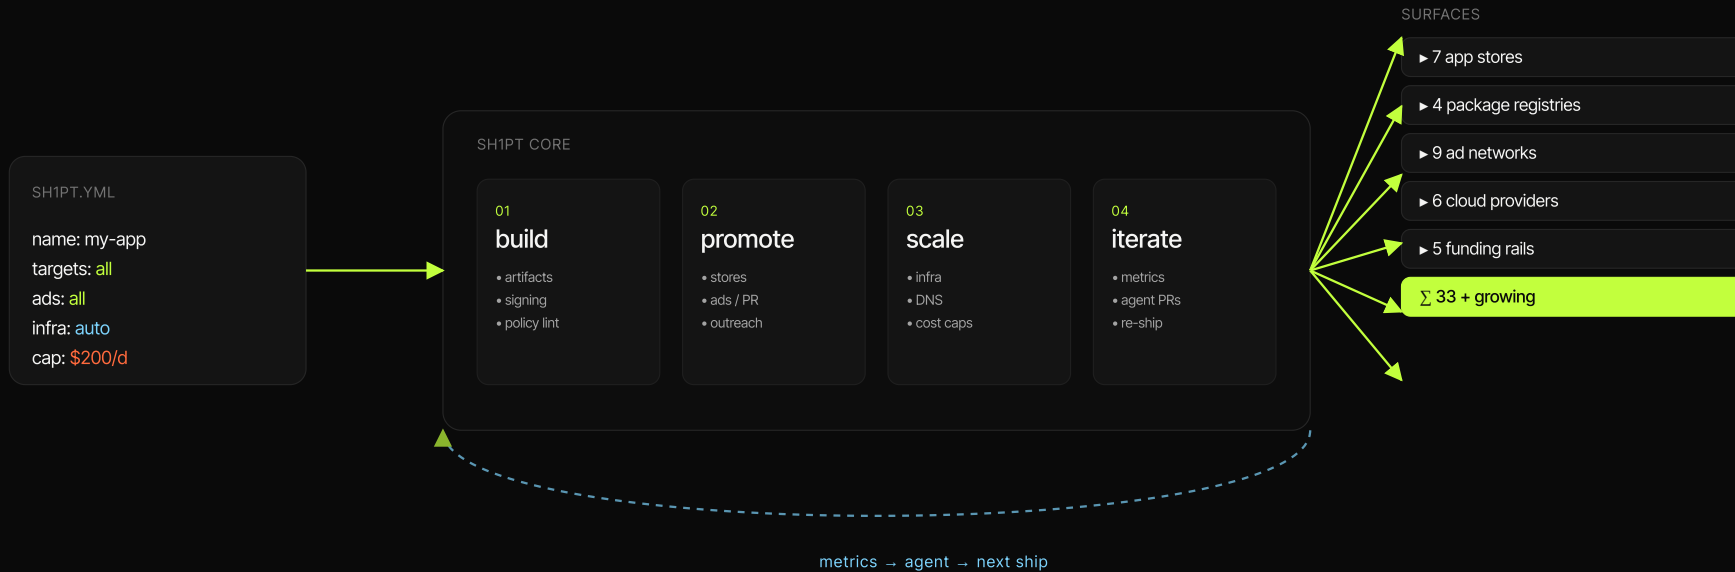

Cloud on demand, with cost ceilings.

04 - ITERATE

Agent closes the loop, forever.

— ARCHITECTURE

From one file to **global presence.**

— THE MOAT

33 surfaces live. Each one took us months.

— WHY WE WIN

Why the moat compounds.

Every new adapter benefits every existing customer. A network of integrations, not a network of users — immune to social-graph churn.

The policy linter gets smarter with every store rejection across the whole customer base. A new customer inherits thousands of learned rules on day one.

Credential + identity vault is the highest-switching-cost layer. Once your Apple, Play, Stripe, and ad accounts live in sh1pt, moving them out is the blocker — not the CLI.

Agent-first from day one. Every AI coding tool is a potential OEM channel. Cursor / Claude Code / Codex can bundle sh1pt for publishing long before a competitor catches up on store coverage.

— ROADMAP

The next 12 months.

Q1 **Hardened adapters.** npm, Homebrew, iOS, Android, Chrome, Cloudflare Pages shipping real traffic. Prepaid waitlist live.

Q2 **Desktop + TV + XR.** macOS, Windows, tvOS, Fire TV, Android TV, Quest, Vision Pro. First 100 paid customers.

Q3 **Promote GA.** Ads + social + outreach + merch live end-to-end. First ARR milestone.

Q4 **Scale + iterate GA.** Infra, DNS, rollouts, agent-driven metric loops generally available.

— THE ASK

Raising \$25k – \$500k checks.

Seed round open. 18 months of runway to own the last mile of software distribution before the window closes.

Lead investors welcome.

USE OF FUNDS

- 60% Engineering – integrations engineers owning the surface graph
- 20% Agent R&D – iterate loop, policy linter, cost control
- 10% Compliance & legal – stores push back, we push back harder
- 10% Build farm – macOS + Windows runners, credential vault, GTM
